

I believe it's very important to not allow the National Association of Broadcasters to be successful in their attempt to stop XM Satellite radio from broadcasting local interest items. In my opinion, traffice and weather are very important areas of local information which should be delivered to the public by as many means as possible, and to purposely disallow any means of getting this info to the public is a huge dis-service to the public at large. General information is not the property of anyone.

Thanks,
Teresa Johansen
